FOLIAR

PK FIGHT 0-22-28

CARBON POWER™ TECHNOLOGY

PK Fight is a reaction potassium phosphite product designed as a foliar supplement for turf. **PK Fight** is fortified with proprietary **Carbon Power™** technology and glycomics for:

- Plant Strength
- Stress Tolerance
- Root Initiation

Carbon Power™ technology is a major advance in combining carbon with primary nutrients.

Carbon is the most basic of plant food. No carbon, no life.

Carbon Power™ contains specific organic acid groups with nutrients having an affinity for those groups to create an extremely mobile and effective delivery technology.

Proprietary **Carbon Power™** technology is university tested and field proven to promote improved:

- Photosynthesis
- Respiration
- Cellular Strength

Treatment	Rate	Interval
Astron	13 L	14 days
Carbon Power™	13 L	14 days
P-48	0,3 kg	14 days
PK Fight	10 L	14 days
ProteSyn	10 L	14 days
Renaissance	5 L	14 days

TECHNICAL INFORMATION

PK Fight is an energy boosting compound specifically formulated for turf.

PK Fight is a proprietary blend from potassium phosphite that is readily absorbed by the plant and enhances the energy generating Krebs cycle.

NUTRIENT CONTENT

Phosphorous Pentoxide (P₂O₅) 22,0%
or Phosphorous (P) . . . 9,6%

Potassium Oxide (K₂O) . . . 28,0%
or Potassium (K) . . . 23,2%

Net Weight: 1,600 kg/L

POTASSIUM - Essential to maintain transpiration, moisture regulation, protein formation and wear tolerance.

CARBON POWER™ - Carbon-rich organic translocators enhance nutrient uptake and movement, which can assist root growth, photosynthesis, and respiration.

PROFESSIONAL USE GUIDELINES

COMPATIBILITY: When applying with other product combinations always check compatibility by using the standard quart jar method prior to tank mixing. Local water conditions may vary and affect compatibility. Always add to spray tank filled to at least 65% and with agitation fully engaged.

METHODS OF APPLICATION: Apply with any equipment that delivers an even mist to the turf. **PK Fight** should be applied with spray volumes of no more than 350 litres per hectare. Spray volumes over 350 litres per hectare reduce product effectiveness. Do not water in. Wait at least 3 hours to irrigate.

DIRECTIONS FOR USE: For general application apply at the rate of 5-10 litres per hectare every two weeks or as indicated.
