

RENAISSANCE

MICRONUTRIENT TECHNOLOGY

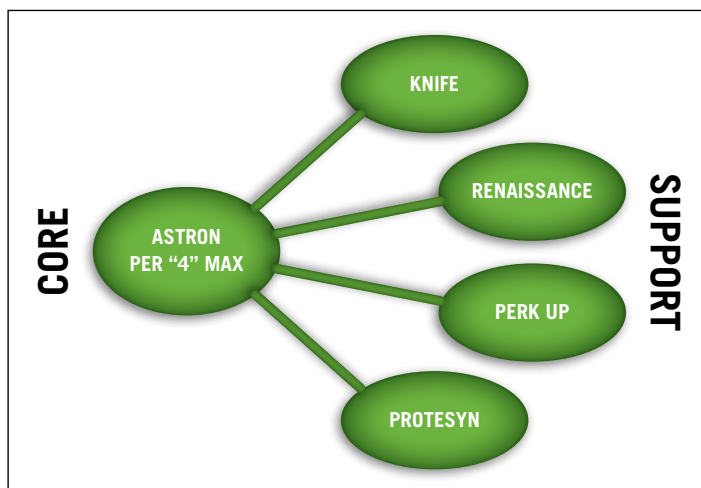

Renaissance is a premium quality micronutrient compound containing **Floratine Technology™** designed to supplement other sound nutritional practices to promote health and quality in managed turfgrasses.

Renaissance provides a balanced formulation of secondary and micronutrients and naturally occurring plant extracts designed to ensure rapid and linear availability of critical elements to all turfgrasses:

- Enhanced Health and Beauty
- Improved Stress Tolerance
- Deficiency Protection and Correction
- Foliar Uptake Economy and Efficiency

Renaissance, as a fortified **Floratine Technology™** product, contains a balanced blending of extracts and other natural fermentation materials. **Renaissance** is well-suited for maintenance applications on all turf. It can also be most helpful in many stress recovery situations.

Floratine Nutrient Platform

For the strongest turf™

TECHNICAL INFORMATION

Renaissance contains an array of essential elements which are often deficient in managed turfgrass under normal and extreme environmental, chemical, and mechanical stresses.

As a supplement to normal fertilization, **Renaissance** contains beneficial amounts of the following nutrients in the correct ratio:

IRON - Necessary for chlorophyll formation, root development, cell division, and nitrogen utilization.

MANGANESE - Essential for phosphorous and magnesium uptake. Aids in chlorophyll synthesis, photosynthesis, and nitrogen uptake.

ZINC - Catalyst for plant enzymes, calcium translocation, and reducing temperature stress.

NUTRIENT CONTENT

Iron (Fe)	2,0%
Manganese (Mn)	1,0%
Zinc (Zn).	2,0%

Net Weight: 1,270 kg/L

PROFESSIONAL USE GUIDELINES

COMPATIBILITY: Generally, **Renaissance** is compatible with nitrogen fertilisers and with fertilisers containing phosphates. When compatibility is in question, always check by using a testing method prior to tank mixing.

METHODS OF APPLICATION: Apply with any equipment that delivers an even mist to the turf. **Renaissance** should be applied with spray volumes of no more than 350 litres per hectare. Spray volumes over 350 litres per hectare reduce product effectiveness. Do not water in. Wait at least 3 hours to irrigate.

DIRECTIONS FOR USE: **Renaissance** can be applied as a corrective measure for some micronutrient deficiencies or, more ideally, in a maintenance spray program to preclude the development of deficiency signs and symptoms. Apply to turf at the rate of 5 to 10 litres per hectare and repeat bi-weekly throughout the active growing season to preclude the development of deficiencies. For specific deficiency problems or questions, please contact your Floratine Distributor.
