

Feel The Power!

PRODUCT DESCRIPTION

V8 is a brand new state-of-the-art creeping bentgrass cultivar developed for the elite, premium golf course. V8 is currently undergoing beta-testing at a number of golf courses worldwide, while at the same time it is receiving a multi-state analysis in the NTEP (National Turfgrass Evaluation Program) putting green trial.

V8 is a hybrid between two preexisting bent varieties, selected specifically for:

- Close-cut tolerance for lightning fast greens
- Dollar spot disease resistance, greatly reducing the quantity of fungicide required.

CHARACTERISTICS

- V8 has one of the finest leaf textures of any creeping bentgrass.
- It is the #1 most dense bentgrass available today, according to NTEP.
- Greens up in the spring earlier than Penncross for additional weeks of golf play.
- A medium dark green color – darker than Penncross and lighter than Alpha.
- Color persists well into the autumn with better than average frost tolerance.
- Adapts well to a wide range of putting green mowing heights, as low as .080 inches.
- Smooth recovery from aerification.
- The #1 highest quality bent variety at Purdue University in West Lafayette, IN, by a considerable margin, topping Penn A-1, Declaration, and many others (data available upon request).

ADAPTATION

V8 is best suited to greens, and it is adaptable to tees, approaches, and fairways. It thrives across the cool, temperate regions of the world, and it is adapted well into the transition zone between warm- and cool-season areas.
